Added Dimension Dentistry is a UK based company offering anti ageing treatments as a natural alternative to cosmetic surgery. A cosmetic dental facelift is aimed at improving a person's appearance in such a way that at the end of the procedure he or she looks better and feels much more confident.

Given the popularity of this field, it was difficult to create a niche in the online marketplace. We have used various other Search Engine Optimization companies but with limited success. We were determined to achieve our goal in being in the top list of major search engines, and sought to find a dedicated experienced company to carry out our optimization process. Another client Mr. Robert Massari recommended them to us.

At first we were somewhat skeptical about signing up with eBrandz, even though they have a good track record. We have however, achieved higher rankings on top search engines with our set of key words, and visitor numbers have increased. We did not have to pay per key word, which is cost effective on the value plan. Language has not proved to be a barrier; the staff has demonstrated their expertise and our experience with the company have been positive. Overall we are satisfied, and may upgrade to the platinum package in the future. We believe eBrandz has met our expectations and have also been impressed with the helpful attitude of the staff. We would recommend eBrandz!
